Test Plan

V.01

Prepared by : Areej F.

1-Introduction:

This test plan describes the testing approach for the web application, which supports two types of users: **Travellers** and **Traveller Agents.**
Testing will be conducted manually based on the defined acceptance criteria for each feature.
The system **includes t**wo main workflows:

- **Traveller workflow**
- **Traveller Agent workflow**
  The website is **UK-based**, and all terminology and labels follow **British English conventions.**
  For more details, refer to the journey videos of the flows.
  * accessible upon request

2-Test scope:

In Scope

- Manual Testing
- Exploratory Testing (system understanding)
- Smoke Testing (initial validation)
- Functional Testing based on Acceptance Criteria
- Sanity Testing after fixes
- Regression Testing after bug resolution
- Performance Testing (Basic Scope – Baseline, Load, Stress)

Design Testing (Figma):

- Test all UI/UX elements according to the linked Figma files.

*Note: Figma require access. QA must request permission from the Product Owner before starting testing.

- Some Figma files are not yet linked; QA must request access to those files and test features against the requirements.

Out of Scope

- Automation Testing (may be considered later)
- **Advanced Security** and **Scalability Performance Testing** [may be performed by specialized teams if required]

Trello Boards to be covered:

Board Name	
Travel MVP Board	**[LINK].**
Travel AI Board	**[LINK].**
Folders, Templates, and Forms Board	**[LINK].**
Tooltips Borad	**[LINK].**
My Trips Board	**[LINK].**

* **Note:** Trello boards require access. QA must request permission from the **Product Owner** before starting testing.

3. Test Strategy & Approach

- Perform Smoke Testing before detailed testing
- Execute Functional Testing for all features based on Acceptance Criteria
- UI and UX elements will be verified against the Figma designs
- Perform Exploratory Testing to identify unexpected issues
- Prioritize High-Priority Cards / Epics first
- Track any Open Topics / Clarifications in separate Trello cards, reviewed weekly with the Product Owner and QA team

Bug Reporting:

- All identified bugs must be logged in the Bug Tracking Sheet
- All bugs must have a defined Severity to indicate their impact on the system
- Bugs will be prioritized based on Severity and Priority
- High Severity bugs must be addressed immediately before further testing

4. Performance Testing (Basic Scope)

Basic performance testing to evaluate system behavior under different user loads:

- **Baseline Testing:** under normal conditions
- **Load Testing:** with increasing number of users
- **Stress Testing:** to identify system breaking points

Performance testing will be performed:

- After system stabilization
- After major feature updates
- Before major releases

5. Test Items

- Sign-up [Traveller /Traveller Agent]
- Login [Traveller /Traveller Agent]
- Traveller Dashboard
- Traveller Agent Dashboard
- Admin Panel
- Traveller Workflow
- Traveller Agent Workflow

6. Test Deliverables

Before Testing:

- Test Plan
- Requirement Traceability Matrix (RTM)
- Test Cases

During Testing:

- Weekly progress reports
- RTM updates
- Bug Reports

After Testing:

- Final Test Report
- Bug Summary Report
- Performance Results (basic observations)

7. Test Roadmap

- Perform Exploratory Testing to understand the system
- Execute End-to-End Testing for main workflows
- Create RTM to track requirements coverage
- Design Test Cases (positive, negative, edge cases)
- Execute Test Cases
- Log Bug Reports (with Severity / Priority)
- Prepare Test Summary Report (charts + metrics)

8. Open Topics / Clarifications

- Any unclear requirements or questions will be documented as separate Trello cards
- Cards will be reviewed weekly with the Product Owner and QA **team** to ensure proper understanding before **continuing** testing

9. Definition of Ready (DOR)

A task is ready for testing when:

- Moved to **Ready to Test** in Trello
- Acceptance Criteria are clearly defined
- Required accounts are available (Traveller / Agent)
- Test environment is accessible

10. Definition of Done (DOD) – Release Criteria

A feature or release is considered done when:

1. All High Severity / High Priority Bugs are fixed
2. At least **90% of Test Cases pass**
3. All Acceptance Criteria for User Stories are satisfied
4. Basic Performance Testing: Error rate ≤ 5% at baseline load
5. All open topics / clarifications are documented and tracked in Trello
